

BECOME ONE OF OUR BEST ELEMENTS

Just as air, fire, water and earth are essential to life, a successful employer is essential to a satisfying career. **Air Liquide**, a global leader in gases for industry, health and the environment, is such an employer. We will value your expertise and creativity, and encourage you to become one of the best elements of our success. Join our team and share our pride in a job well done – you'll be in good company.

FILLING PLANT OPERATOR – Edmonton – Unionized position – Full time permanent **An overview of the mandate**

Safety will be paramount in your role as a Filling Plant Operator, which consists in filling and handling high-pressure cylinders to meet client expectations, while ensuring that operations are efficient and meet ALC's quality and safety objectives. You will also be considered the Facility Manager in accordance with the Industrial Management System (IMS). Specifically, you will:

- prepare empty cylinders for filling by checking for defects, sorting and cleaning them, replacing labels and inputting data into the Cylinder Management System (CMS)
- fill cylinders according to the Product Preparation sheet and Product Filling register for the specific gas, including equipment start-up and shutdown
- be familiar with, and follow, all ALC safety and quality requirements, policies and procedures, report any safety issues, and ensure that appropriate corrective and preventive measures are in place to respond to customer complaints
- implement quality control procedures in line with the Technical Reference Manual (TRM)
- participate in the daily clean-up of the plant and in keeping tools and equipment in good working condition
- participate in work planning and administration
- work with your own team and other cross-functional teams to continuously improve work processes
- identify any non-compliance activities and propose appropriate solutions

Critical competencies for success

- Technically adept, you easily master job-related concepts, tools and methods, meet or even exceed professional requirements, and keep abreast of new developments in your field.
- You are a skilled problem-solver, able to identify and analyze problem situations in a timely manner, highlight key issues, as well as develop and propose alternative, feasible solutions.
- A cooperative team player who shares knowledge and experience, you listen to others and consider their needs, ideas and opinions when making decisions.
- You know how to define and achieve objectives, determine and efficiently allocate required resources, establish and implement work plans, establish priorities, and use efficient methods, systems and work tools.
- You are a proven leader, concerned with people as much as with results, able to obtain cooperation from others.

The ideal Filling Plant Operator profile

- High school diploma
- 3 to 5 years of experience in the industrial sector
- Quality System (ISO), safety and forklift truck training
- Knowledge of compressed gases, and the handling and transportation of dangerous materials
- Written and oral communication skills
- Mathematical skills
- Ability to meet the physical demands of the position
